

An aerial photograph of a forest landscape in Eastern Finnmark, Norway. The image shows a complex pattern of green and brown vegetation, likely representing different forest types or stages of change. The terrain is rugged, with a network of roads and paths visible. The colors range from vibrant green to dark brown, indicating varying levels of vegetation density and health. The overall scene is a dense, textured mosaic of natural elements.

Modelling Patterns of Vegetation Change in Eastern Finnmark, Norway

Henry Beimers

Location

Problem Statement

- Two vegetation types
 - a. Forest
 - b. Non-Forest
- Three decades
- Any changes
- Hypothesis: Forest cover has increased since 1985

Data

Temporal:

- 1985 - 2019
- Three Maps: 1985, 2004, 2019

Spatial:

- 30 x 30 resolution
- Landsat TM, ETM, OLI
- East of the Tana River but within Norway

Process

Training Data:

- Personal Experience
- Texture and variance
- Slightly different training locations each year

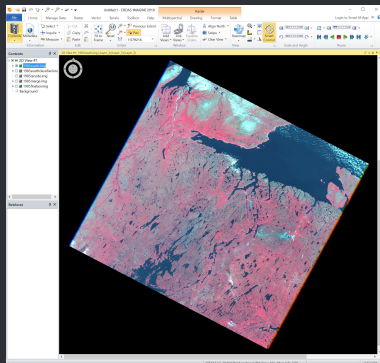

Classification:

- Minimum distance
- 4 classes

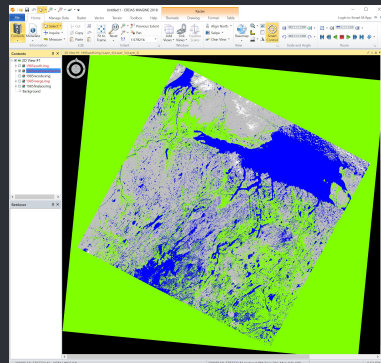

Additional processing:

- Mosaic
- AOI
- Recoding
- Model (F-F-F, F-NF-F, F-NF-NF, etc.)

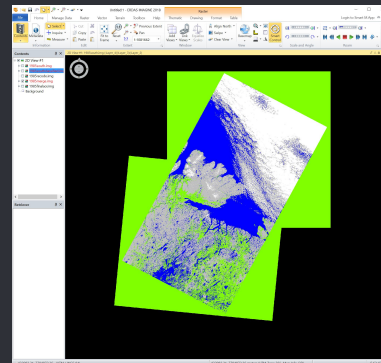

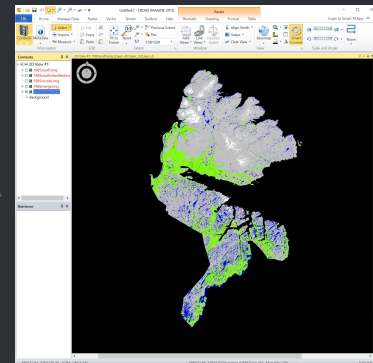

Stacked Image

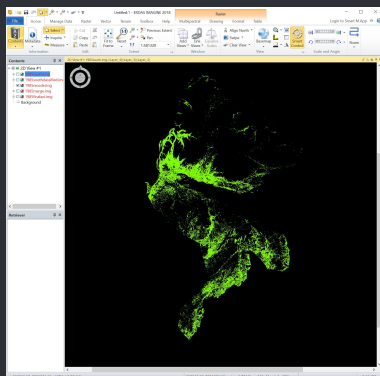

Supervised classification

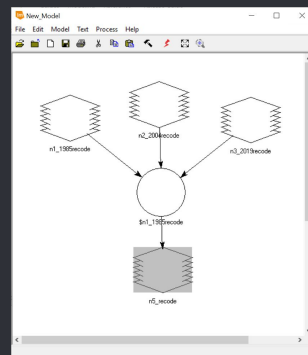

Mosaic

Shapefile AOI

Recoded for 2 classes

Model

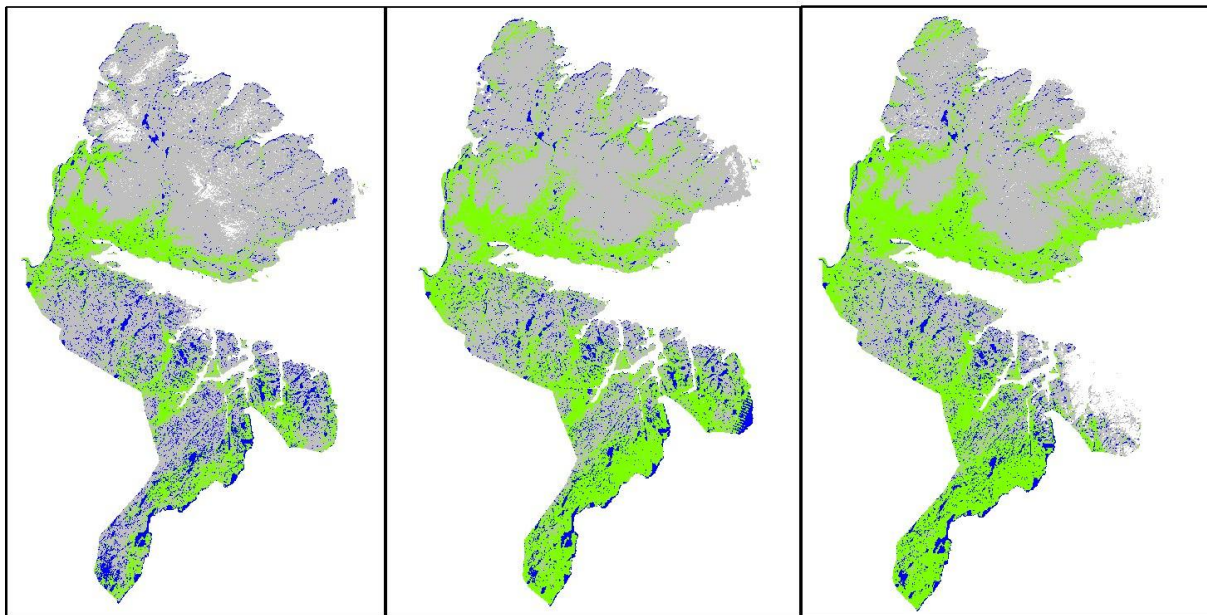

Image Difference (tried just to see)

Model Output

Classifying Land Cover in Eastern Finnmark, Norway - 1985, 2004, 2019

Discussion

Causes?

- Climate
- Grazing
- Invasive Species

Error?

- Training Data

Future Research?

- Causes
- Vegetation Types
- Statistical analysis
